MESSAGE

Dear Children,

My warm wishes to all on the occasion of Children's Day 2019. I am sure the festive mood would have already set in the home away from home. Hope you have planned to celebrate this event with joyful programs in the school.

It gives me immense pleasure to write to you on the occasion. Since from the past 2 years, I am regularly appealing to all functionaries in the system to ensure joyful learning environment in the schools. It is a matter of pride to recall that Mast Ravikiran and Kum Teja Rani of Class X in JNV Adilabad have set an example of passionate learning by using the opportunity available in the Atal Tinkering Lab and designed a new product for blind. It is likely to be launched for commercial use shortly. What is exciting for me is their interest in using their learning to support the needy through the possible research. The support provided by the school is also commendable.

The residential set up gives the freedom for the students and teachers to convert the available time in to enjoyable moments. We are successful if our interactions result in assisting the students in using the learning to develop the competency in solving the problems in real life situation.

I hope you have been briefed about your participation in PISA 2021. Although it is an International survey, it only analyses our *ability to read the large text with a focus, understand the concept, ability to apply concept, reason out cause and effect to interpret the core values of the text in relation to real life situation.* The texts in PISA give the real life situation where in you have to apply concept learnt, use of different data for its interpretation. In fact, it is just an extension of your reading in Class to different observations in life. So not only you should learn the concept in Class, but also apply these to explain the experiences and observation in day to day life.

Future employments will require your skill of solving the problems in the real life. Global competitions will push you back if you do not prepare in advance. All competitive examinations will have the same formats. Therefore, it is worth modifying your way of doing i.e. applying concepts to actual situation.

Wish you all Happy Children's Day

(Bishwajit Kumar Singh)
